Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 66-86 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the written description requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. The claims now include the limitation that the distal portion is more flexible than the proximal portion. The support for such a limitation in the specification relates only to the Figure 4A embodiment and does not relate to the distal portion of the catheter. As disclosed, the intermediate portion is divided into proximal and distal segments, and it is the distal segment of the intermediate portion that is more flexible. Such a limitation was not originally disclosed in association with claimed Figure 13A embodiment.

Response to Arguments

Applicant's arguments have been fully considered but they are not persuasive. As noted above, the distal portion of the intermediate portion in Figure 4A was disclosed to be more flexible, not the distal portion of the catheter. Therefore, the distal portion of the catheter being more flexible was clearly not disclosed. However, even claiming such a feature would still be considered outside the written description. Applicant has clearly delineated specific embodiments in the disclosure. Further, throughout the specification, a reference "as with

Art Unit: 3739

previous embodiments" has been employed, but such reference is always specific to a particular feature. The reference is not employed to be generic in nature so as to encompass all disclosed features. It was not used to incorporate this particular feature into the Figure 13 embodiment. Accordingly, the rejection is still deemed to be proper.
